

Waterjet/Plasma cutting machine type BP

Best
Quality

BP-C (Compact) 4020

TCI waterjet-/plasma cutting machines type BP are innovative, flexible combination machines of extremely high quality, manufactured in Spain, using the newest technology for product optimization. Type BP is characterized by a bridge-type construction, which gives great robustness and enables to cut large surfaces. The gantry drive system on the Y-axis allows high acceleration and high speed thus reducing operating time.

BP-S, BP-M and BP-H can all be expanded in length by adding new modules. Max. no. of bridges of BP-S & BP-M are 4 pcs. A plasma head can be built onto all BP models.

The machines come with various high-pressure pumps and various cutting heads depending on the job to be carried out and the material.

Fields of application:

- Aeronautics (alloys, titanium, etc.)
- Food (chocolate, fish, etc.)
- Automotive (rubber, composites, etc.)
- Construction (iron, marble, ceramics, etc.)
- Metallurgy (stainless steel, brass, etc.)
- Toys (foams, synthetic fibers, etc.)
- Furniture (glass, wood, fabrics, etc.)
- Advertising (plexiglas, PVC, vinyl, etc.)

BP-S (Standard) 3060

BP-H (High) 3040

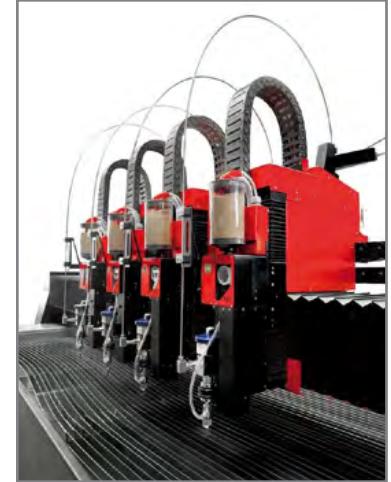

BP-M (Modular) 4060

Waterjet/Plasma cutting machine type BP

Best
Quality

Advantages and characteristics:

- Travel speed up to 85 m/min.
- "Smart system" for moving up to 4 independent cutting heads, allowing maximum utilization of materials.
- Real time consumable status monitoring software allows preventive maintenance and downtime prevention.
- Fully automated sludge removal system.
- CNC, control cabinet, intensifier and peripherals are shielded from the working area of the machine.
- Possibilities for both frontal and lateral loading of materials.
- Autonomous functioning system.
- Anti-collision system with digital sensitivity regulation.

Direct Drive 3800 waterjet pump

The use of Direct Drive waterjet pumps is recommended for use in applications where the flow rate rather than the actual pressure is most important, especially with low pressure multiple-head applications. This type of pump uses an electric motor to turn the crankshaft attached to 3 or more pistons which generate the pressure and the water flow. Cooling equipment not required. Suitable for low pressure cutting where delamination occurs. Work pressure up to 3800 bar.

SL-V Plus 4100 waterjet pump

The latest generation of SL-V Plus waterjet pumps offers the most advanced waterjet technology with working pressures up to 4100 bar, allowing cutting with the highest speeds and achieving the cleanest cuts.

Streamline PRO 6200 waterjet pump

Streamline PRO 6200 offer a new range of products, which provide a breakthrough in the world of waterjet cutting. "PRO" stands for waterjet cutting technology with working pressures up to 6500 bar. It contains all the components necessary for this, from the generation of high pressure to the nozzle, which directs the waterjet onto the selected material. The pressure of 6200 bar is an increase of almost 50% compared to conventional pressure ranges.

Optional equipment:

5-axis cutting head, 90° angle cutting, 3D, patented design, full rotation.

Automatic abrasive regulator. Stops automatically when the abrasive has been used up.

Autonomous "non-return" system, prevents water and abrasive from rising up if jammed during the cutting process.

Electronic collision system for the cutting heads, stops the machine before damages occur.

Automatic pneumatic dosing of abrasive incl. sensor. Capacity 200 L.

Equipment for pre-drilling of fragile and multi-laminated composites. Possible to mount different drill bit diameters.

Fully automatic sludge cleaning system. Collects sludge, separates water from the sludge and recirculates it back into the tank.

Water cooling system for hydraulic oil of the intensifier pumps with a closed water circuit.

2000 kg hopper for machines with high production output.

Water treatment equipment. Conditions the water before entering the intensifier.

Height regulation system ensures constant distance between the nozzle and the cutting material, enabling cutting in uneven surfaces.

Laser pointer

Jet Control - eliminates conicity on parts by means of tangential cutting function programmed in the CNC system to transform it to 5 axes.
